## ABSTRACT OF THE DISCLOSURE

A polypropylene resin composition comprising: 100 parts by weight of a polypropylene composition 5 (D) comprising 50% to 95% by weight of a polypropylene (A), 0% to 25% by weight of an ethylene-  $\alpha$ -olefin copolymer rubber and/or aromatic vinyl compound-containing rubber (B), and 5% to 25% by weight of talc (C) having an average particle diameter of not more than  $3\mu$ m; and

0.5 to 8.0 parts by weight of a pigment master batch (E) having a hydrogen ion concentration of 5 to 7 and satisfying the expression:  $0.35 \le \eta \, \text{pig}/\eta \, \text{comp} \le 1.20$ , wherein the  $\eta \, \text{pig}$  represents a viscosity (poise) of the pigment master batch, and the  $\eta \, \text{comp}$  represents a viscosity (poise) of the polypropylene composition (D).
